

The data that follow are the pre-therapy Rorschach Prognostic Rating Scale (PRS) scores for subjects who showed improvement during therapy and those who did not. Those who claim that a patient's PRS score can help to predict whether therapy will be effective would like to show that the scores differ with respect to their central location.

Improved		Unimproved	
Subject	Score	Subject	Score
1	11.9	1	6.6
2	11.7	2	5.8
3	9.5	3	5.4
4	9.4	4	5.1
5	8.7	5	5.0
6	8.2	6	4.3
7	7.7	7	3.9
8	7.4	8	3.3
9	7.4	9	2.4
10	7.1	10	1.7
11	6.9		
12	6.8		
13	6.3		
14	5.0		
15	4.2		
16	4.1		
17	2.2
